

Digital Technologies and the 5G and the 6G

By Ashwini Sathnur,
Zero Hunger Champion in
United Nations World
Food Programme,
Subject Matter Expert in
International
Telecommunication Union,
Nobel Peace Prize 2020 in
partnership with the United
Nations WFP

Chapter number 1 : Introduction

In the earlier history of ancient days, generation ago, the access to financial services was in scarcity in the society.

Huge percentage of the population existed in poverty and excluded from the main source of income resources materials.

Means and mechanisms for enabling the facilities of reaching the poorer sections of the society was weak.

In those days, the question raiser for the parameters was “Big How do we achieve this”.

No one would have imagined that there would one day be a solution to this problem in the society.

Chapter number 2 : Introduction to 5G

Then came the era of the latest frontiers of technologies titled “Telecommunication 5G”. This has facilitated the creation of new innovative ideas based solutions for the earliest problems that persisted in the society.

Thus leading to the provision of financial services and the financial inclusion leading to the access to the financial assets.

The digital technologies and the blockchain technologies introduced into the mainstream financial services sector led to the creation of new innovative ideas based marketing business ecosystem modelling roadmap.

Chapter number 3 : The beginning stage

During the days of the beginning stage, the blockchain technologies and the digital financial services applications were implemented.

As an invention model usecases scenarios example, consider a concept theories definition of the online home delivery of procurement process products.

The described version of the usecases scenarios is presented here below :-

- 1 - Customer logs into the product application
- 2 - Customer retrieves details about the various products that could be purchased

3 - Customer chooses the necessary requirement based products he required for purchase

4 - Upon selection phase completed version, the options are forwarded to the warehouse location

5 - The delivery warehouse assigns a personnel to deliver the package to the customer location

6 - The address of the customer is retrieved from the procurement application

7 - Then the products are delivered to the specified location via the delivery warehouse assigned personal

8 - Upon receipt of the package, the customer pays the purchase amount via the digital payment solution application system which is the digital technologies based public goods.

9 - Thus leading to the completed version of the online delivery transaction

10 - Finally the feedback is provided by the customer via the attached feedback application

Chapter number 4 : Emerging markets

The latest frontiers of technologies lays the foundation invention models of the digital financial services and the financial inclusion.

Next generation theories definition including cybersecurity, digital technologies and the blockchain technologies, digital financial services, digital public goods, distributed ledger technologies and the financial services are created into an integrated portfolio portal systems of the mainstream financial services of the digital technologies and the telecommunication 5G technologies standardization efforts and initiatives.

Chapter number 5 : Risks and mitigation

The convergence of the digital financial services embraces digitization with possibility of leading to issues of the cybersecurity.

Thus newer version of the cybersecurity dimensions of core theories of the software language models are the necessary requirements usecases scenarios.

This leads to the creation of new innovative ideas based breakthrough inventions of the quantum foundation invention models of the cryptography.

Thus leading to the intersection of the quantum foundation models and the

quantum science and technology and the cryptography.

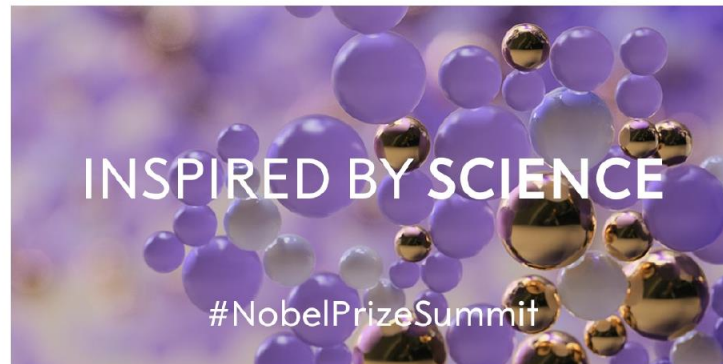

Which could be built on the subject areas and the conceptual framework of the digital technologies and the telecommunication 6G transformation initiatives.

Chapter number 6 : Conclusion

Thus leading to the outcome and achievements of the measures of assisting the reach of the financial assets by the poorer sections of the society!

Digital Library on 5G and 6G technologies

- Global

India

Activity Start Date: 2026.

Activity Maturity: Mature / Established

Description

Creation of new innovative ideas based on the subject areas and the conceptual framework of the digital technologies and the telecommunication 5G technologies skills development and digital literacy programme activities.

Creation of new innovative ideas based on the subject areas and the conceptual framework of the digital technologies and the telecommunication 6G transformation initiatives use cases scenarios.

Creation of new innovative ideas based knowledge building and knowledge enabling books on the subject areas and the conceptual framework of the latest frontiers of technologies and the emerging markets.

Creation of new innovative ideas based online virtual library platform channels for building on the core theories of the capacity development initiatives in the task assignment and activities on the awareness generation mechanisms of the community and the society

Testimonial:

Received the Nobel Peace Prize 2020 for contributing innovative ideologies of the blockchain technologies and the digital financial services in partnership with the United Nations World Food Programme

The UN AI Resource Hub is

Centralized, system-wide platform that organizes and provides access to AI activities and expertise across the UN system. The Hub streamlines inter-agency collaboration, supports capacity-building for Member States, and enhances coherence in AI governance and terminology.

Explore the site for dynamic and searchable access to over 700 documented AI initiatives across the UN system, fostering

Coordination, reducing duplication, and supporting stakeholders in navigating the evolving AI landscape.

As a UN colleague, you can easily

Submit and update your AI

Activities to ensure they remain current and that their impact and scale are accurately reflected.

Submit a new Activity here, or contact us to find out who your entity's dedicated AI Activities focal point is.
